

## IGV-B2020

The **IGV-B2020** is an advanced high-speed progressive scan, fully programmable CCD camera designed for imaging applications that require high frame rates, high quality images, and powerful features and flexibility. The camera has a small size, light weight, and is built around Kodak's KAI-4022 Interline transfer CCD image sensor with a 1.3" optical format (21.5 mm image diagonal). IGV-B2020 is available with Ethernet output (GigEVision compliant).

The B2020 provides an image resolution of 2056 x 2060 and delivers up to 20.4 frames per second at full resolution. The camera image processing engine is based on a high-speed, high-density FPGA, featuring programmable resolution, speed, 8 independent AOIs, binning, triggering, exposure control, line and frame time, I/O mapping, external/internal sync, AGC, AEC, Auto Iris, transfer function correction, user LUT, Defective and Hot Pixel Correction (DPC, HPC), and Flat Field Correction (FFC).
